

Moeve provides access to over 90,000 electric charging points across Europe through interoperability agreements

- **Moeve customers can find more than 90,000 electric charging stations, including 7,500 in Spain, to connect the main European corridors thanks to its own network and the network of partners such as Emovili, EnBW, Endesa, Ionity, Powerdot, Total Energies or Zunder**

Moeve expands its charging network making electric mobility more accessible for both private and professional users. The company has set up partnerships with operators so that its customers can access more than 90,000 charging points, 7,500 of them in Spain, thanks to interoperability agreements. This network connects the main European corridors in countries such as France, Portugal, Germany, Spain, Belgium, the Netherlands, Luxembourg, Italy or Poland. The entire network includes 13,500 high power charging points.

With these agreements, Moeve customers can access a vast charging network, easily find charging points, check rates and pay seamlessly through the app or an RFID card after charging. This card enables the user to identify themselves from a reader to quickly and securely use the charger, without the need for another device or payment method.

Moeve's network is compatible with leading charging operators, including Emovili, EnBW, Endesa, Ionity, Powerdot, Total Energies and Zunder. This allows customers to access charging points at service stations, parking lots, public roads, supermarkets and other convenient locations.

Isabel Gorgoso, Moeve's New Mobility Director stated that: "At Moeve, along with our partners, we offer electric vehicle drivers a global solution that covers their charging needs both in the city and on the road, making electric mobility truly possible. Through our interoperable network, customers can easily locate the nearest charging point and pay safely."

Commitment to sustainable mobility

Moeve is advancing its goal to lead sustainable mobility in Spain and Portugal, aligning with its transformation strategy, 'Positive Motion'. The company already operates over 200 ultra-fast charging points at its stations. Ultra-fast chargers (with at least 150kW of power) can recharge 80% of the battery of electric cars in 10-20 minutes - depending on the type of vehicle - a time equivalent to refueling a combustion engine.

Moeve is a global company comprising over 11,000 employees, committed to sustainable energy and mobility, with the ambition to drive Europe's energy transition and accelerate decarbonization both within the company and for its customers.

After leading the energy sector as Cepsa for more than 90 years, the company launched its new brand, Moeve, in October 2024. This new identity reflects the acceleration of its transformation to lead in the production of sustainable energy powered by green molecules, including green hydrogen and second-generation biofuels, as well as sustainable chemical products. It is also developing an extensive network of ultra-fast chargers in Spain and Portugal to boost sustainable mobility.

Through its 2030 Positive Motion strategic plan, Moeve is working to transform mobility and energy to create a better world, ensuring today's energy supply while focusing on sustainable energy solutions for the future.
