

More than 500 Cepsa service stations equipped with solar panels installed by Redexis

- **Both companies are moving forward in the creation of the first global photovoltaic energy network at service stations in Europe**
- **Cepsa stations currently have 12,000 solar panels with a production capacity of 10,000 MWh/year, which reduce more than 3,500 tons of CO₂ per year**
- **Cepsa is transforming its service stations, the second largest network in the Iberian Peninsula, into multi-mobility spaces offering a variety of energy solutions and ultra-convenience and catering services**

More than 500 Cepsa service stations are now equipped with photovoltaic panels supplying renewable energy as part of a project developed with Redexis, which is responsible for the panels' installation, commissioning and maintenance. The move illustrates both companies' progress in the creation of the first global photovoltaic energy network at service stations in Europe.

In total, Cepsa's service stations have 12,000 high-tech photovoltaic panels with a production capacity of 10,000 MWh per year, equivalent to the annual energy consumption of 4,000 homes. The installation of these panels prevents the annual emission of 3,500 tons of CO₂, which is equivalent to planting 1,700 trees, thus contributing to Sustainable Development Goals 7 (affordable and clean energy) and 13 (climate action).

The panels supply Cepsa's service stations during the day and any surplus is fed into the distribution network, thus optimizing the facilities' overall energy efficiency and allowing 100% of the service station network to consume electricity from renewable sources.

Pierre-Yves Sachet, Director of Mobility & New Commerce said: "We continue to make progress in the transformation of our network with the aim of accelerating the energy transition and becoming leaders in sustainable mobility and energy in Spain and Portugal. We want to offer our customers a range of solutions for sustainable mobility, as well as a pleasant and complete experience at our service stations, which we are turning into spaces for multi-mobility and ultra-convenience services."

For his part, Javier Migoya, Director of Expansion at Redexis, said: "At Redexis, we continue to advance in our commitment to energy efficiency, providing renewable solutions for all customers and helping them in their goals of improving environmental quality and energy transformation, as is the case of Cepsa, a partner of reference and a leader in mobility in Spain."

Multi-mobility spaces

Cepsa's commitment to transform its service station network is part of its 2030 strategy, Positive Motion, through which the company aspires to be a benchmark in the energy transition and a leader in sustainable mobility and energy in the Iberian market during this decade.

In addition to the installation of photovoltaic panels, Cepsa is transforming its more than 1,800 service stations, located in strategic locations both in urban areas and across the main transportation corridors and hubs, into multi-mobility spaces. These facilities, which are being digitized, will offer a wide variety of ultra-convenience and catering services, as well as different energy solutions.

Renewable energy solutions for mobility

Redexis announced in 2022 its 'Energy26' Strategic Plan, which entails an investment of more than €1 billion over five years (2022-2026) and focuses on intensifying its growth in the deployment of sustainable and energy transition infrastructures, as well as supporting the transformation of the sector in terms of sustainability and efficiency.

In relation to energy efficiency, where solar self-consumption is included, Redexis aims to develop 190MWh of solar self-consumption focused on the B2B segment by 2026.

It also offers natural gas vehicle (NGV) solutions, thus contributing to sustainable mobility and respect for the environment. Redexis already has 27 gas stations for both LNG and CNG, and Energía26's objective is to expand the network to 60 gas stations focusing on LNG for long distance transport fleets and CNG as a solution for service fleets.

About Cepsa

Cepsa is a leading international company committed to sustainable mobility and energy with a solid technical experience after more than 90 years of activity. The company also has a world-leading chemicals business with increasingly sustainable operations.

In 2022, Cepsa presented its new strategic plan for 2030, Positive Motion, which projects its ambition to be a leader in sustainable mobility, biofuels, and green hydrogen in Spain and Portugal, and to become a benchmark in the energy transition. The company places customers at the heart of its business and will work with them to help them advance their decarbonization objectives.

ESG criteria inspire all of Cepsa's actions as it advances toward its net positive objective. Over the course of this decade, it will reduce our Scope 1 and 2 CO₂ emissions by 55% and the carbon intensity index of our products by 15-20%, with the goal of achieving net zero emissions by 2050.

About Redexis

Redexis is an energy infrastructure company with a sustainable and environmentally responsible business model, committed to energy transition and economic development. The company focuses on the operation and maintenance of natural gas and LPG transportation and distribution networks, as well as on energy

efficiency, mobility and the development of renewable gas projects such as biomethane or green hydrogen, thus contributing to decarbonization and meeting the objectives of the circular economy. The company has a robust and continuous expansion plan in place, with around 1.5 billion euros invested since 2010, and its continuing aim is to create lasting value across the communities in which it operates, with 350 direct job positions and nearly 3,000 indirect. In 2022, the GRESB Sustainability and Infrastructure Index awarded it the title of "Sector Leader" while maintaining the highest ESG (Environmental, Social, and Governance) rating of five stars, achieving a total of 95 points out of 100. And it obtained the result of "Advanced" in the Sustainability and CSR of Moody's ESG solutions rating.
