

Cepsa welcomes students from the Campo de Gibraltar area to complement their training

- **27 Dual Vocational Training students and university students are doing their internships at San Roque Energy Park**

A total of 27 university and Dual Vocational Training students are doing their internships at the Cepsa Energy Park in San Roque in the areas of Optimization and Maintenance, and as plant operators.

True to its commitment to education, Cepsa has welcomed these students from the region, giving them the opportunity to further their academic training and gain their first professional experience. The current Vocational Training students come from Campo de Gibraltar schools such as Getares, Torre Almirante, Virgen de la Esperanza, Castilla del Pino, Ventura Morón, Sierra Luna, and Mediterráneo. They are doing their training at the Energy Park as chemical plant operators and in Maintenance roles. Meanwhile, the two university students are studying Industrial Engineering and Chemical Engineering.

The HR Manager at the San Roque Energy Park, Juan Antonio Rodríguez, emphasized that "for the students, it's an opportunity to see firsthand how the work is done, the demands of the career they have chosen, and for our professionals to serve as examples. We're confident that they'll make the most of this opportunity. They also bring a fresh perspective and an exchange of ideas, and that's always a good thing."

It's also worth noting that Cepsa and the Ministry of Education of the Andalusian Regional Government signed an agreement last year to promote training on green hydrogen, which falls within the framework of the training plan designed to spearhead education on the energy transition and renewable energies. The training plan has been designed to address the training needs of teachers, as identified by a working group of Andalusian educators specifically formed to outline the actions that the Ministry will undertake in the coming academic years. Likewise, specialized training in renewable hydrogen is considered essential in Andalusia.

Cepsa is a leading international company committed to sustainable mobility and energy with consolidated technical experience after more than 90 years of activity. The company also has a world-leading chemicals business with increasingly sustainable operations.

Under its *Positive Motion* strategic plan for 2030, Cepsa aims to be a leader in sustainable mobility, biofuels, and green hydrogen in Spain and Portugal, and to become a benchmark in the energy transition. The company places customers at the heart of its business and will work with them to help them achieve their decarbonization objectives.

ESG criteria inspire everything Cepsa does as it advances toward its net positive objective. Over the course of this decade, it will reduce Scope 1 and 2 CO₂ emissions by 55% and the carbon intensity index of energy products sold by 15–20% versus 2019, with the goal of achieving net zero emissions by 2050.
